INTERNATIONAL

2019

Published in the **July-August** issue of AI magazine

Find out what's new in the fast-changing global MEWP rental sector. This year's access50 listing of the world's largest access rental companies, ranked by fleet size, is as illuminating as ever.

access50 RENTAL FLEETS

Crossing the rental world

It has been another striking year for the **access50**, thanks to a range of acquisitions and new entries.

Let's get started with the buyouts. Since the 2018 listing, United Rentals confirmed it had bought BlueLine, helping to bring its MEWP fleet size to a blistering 145,686. It was only three years ago, in the 2016 list, that United was still on its way to hitting the 100,000 fleet size target. This year, its closest competitor Sunbelt has risen above that landmark too for the first time, with more than 104,000 units.

It was two years ago that third-placed Loxam entered the top 10 for the first time, thanks to its acquisition of Lavendon Group. It joined Mateco (part of the TVH group) as only the second Europe-based rental company in the top 10, which remains the case today.

Both have been on the acquisition trail in the last 12 months, and it's worth pointing out that Loxam's figure in this list does not include Ramirent, as the deal was not 100%

confirmed when it was compiled, and we are waiting on an exact number for Ramirent's fleet – estimated separately here. It does not make any difference to the placings in the table and, no doubt, Ramirent's fleet will be incorporated next year.

Topping up

Outside the top 10, access specialist Riwal, in 12th position – up two places on last year – has been growing its presence around Europe, with acquisitions in Germany, Sweden and Denmark, as well as making considerable organic investment in its fleet. Just one place behind in 13th is Kiloutou, following its wave of investments that pushes it three places up the table. It too has bought companies in the last 12 months in Germany, along with buyouts in Spain and Italy, demonstrating that these southern European markets are on their way back, particularly Spain. On that subject, Mateco also made its first move into

Spain this year by acquiring the country's oldest access platform rental company Afron. This follows Loxam's previous move into the country when it bought Hune in 2017, just after its investment in Nacanco in Italy that year.

Brazil merger

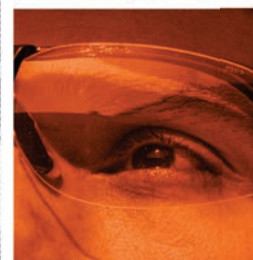

Further down the table, in 23rd position, is Mills. Brazil's largest rental company announced earlier this year that it was merging with Solaris, based in the same country. Both have been longstanding entries in the **access50** and the takeover of Solaris by Mills underlines the economic issues in the country over recent years and the continued challenges that lie ahead.

50 YEARS OF ACCESS. 50 YEARS OF JLG.

“Every JLG® lift that leaves our plant carries my initials, so I insist on the best materials, tough design and production standards and thorough testing.

– John L. Grove, Founder, JLG Industries

In 1969, John L. Grove rallied a small group of people around one big idea—there has to be a better way to work at height. From there, he invented the first boom lift, started our company and pioneered the access industry. We continue to innovate today, engineering advanced equipment solutions for customers around the world.

Our first 50 years laid the foundation. Our next 50 solidifies a legacy.

See how at jlg.com/jlg50

Beyond the usual ups and downs of the **access50**, there is a notable new wave of entries from China. Rental is booming across Asia, particularly in China, where just a few years ago there were no rental companies with more than 1,000 MEWPs in their fleets.

Now there are up to ten of them, and that figure will grow significantly over the next five years. I am slightly vague on the exact number, as the fast-moving market means things change quickly.

In addition, new markets sometimes have different dynamics to those in mature markets. Just for example, where the rental model is developing, we find more distributors

offering rental in addition to their usual services. Indeed, XCMG Guanglian, which appears in the **access50**, is a subsidiary of manufacturer XCMG and focuses on rental.

Another example is Zhongneng United Digital Technology, which does not appear in the list. It claims to oversee a fleet of around 20,000 units. Most of the equipment is not owned directly by the company, rather by partners and investors, similar, in some cases, to a franchise arrangement. The company was set up in 2016 and says it is seeking an IPO this year.

Southeast Asia, which has a number

of growing access markets, like Malaysia, Thailand, Vietnam and Indonesia are following similar paths. There are already a few companies that are already based in those countries, or operate there, in this list.

Growth markets

Another growing market is Turkey. We have the country's largest rental company in this list for the first time, that being MRT Makina, with more than 2,300 units in its fleet. Turkey is an important country for access and includes three rental companies with more than 1,000 units. Most of their fleets are based in their home country but

the potential for expansion into surrounding Middle East countries, including Iraq, Iran, Syria, Azerbaijan and Turkmenistan, among others, where they have been known to operate, is great.

Moving back to the subject of the established markets of North America and Europe, there is impressive growth over the last year across the board. There has been talk of rental market growth in both continents slowing somewhat this year and next. Even if this is the case, the curve will come from a very high level. And it's worth remembering that a reasonable, often cyclical, slowdown is preferable to a crash from a grossly high level that is unsustainable.

New era

All this would suggest that the global MEWP rental sector is in a very healthy place. For more information on developing markets, see the China feature in this issue of the magazine, and for a view on Spain's move back into growth, there is a country report

towards the back of the issue.

And, as we head into a new era of rental we, here at *Access International*, are always on the look out for new entries to the listing. If you are aware of any rental companies that are not listed, but should be, please get in contact.

Similarly, if your rental company is not represented, let us know. The form is quick and simple to fill out and helps us provide an accurate view of the access industry. **AI**

THE SURVEY

This survey was carried out via an e-mail and e-cast campaign in the two months leading up to the publication of this list. Companies with MEWP fleet sizes above 500 units were asked to provide quantities of each platform type in their fleet, along with the other details shown in this listing. This year, for the fourth time, we have also shown the number of telehandlers in each company's fleet. Where figures have not been available we have made an estimate.
